

The 51st meeting of the International Society for the System Sciences will be held in Tokyo, Japan, from August 5 to 10, 2007. The theme for this year's conference is "Integrated Systems Sciences: Systems Thinking, Modeling and Practice".

The ISSS promotes systems sciences as an approach to complexity in a broad sense, identified in organizations, communities and societies, and their environments. The conference will bring together systems professionals from around the world to share information about research and practice.

Abstracts are still being accepted on a space-available basis until June 1st, for presentations at the conference.

For final papers to be included in the conference proceedings, though, abstracts must first be accepted and the papers submitted by **May 31st**.

More information, including abstract and paper submission guidelines, and conference registration forms, can be found through:
